

HI ma App — QA Module Breakdown

Module-wise testing scope (user perspective)

19 modules · M01 — M19 · Test cases will be added later

QA Module Breakdown — HI ma App

Purpose: Split the entire app into clearly-owned modules from a **user's point of view**, so the QA team can divide work, test everything a real user would see, and report findings with a stable bug-ID format.

Test cases: Intentionally **out of scope** in this document. Step-by-step test cases will be added later, per module. For now this doc only defines *what each module is about* and *what screens & actions the user will see*.

Field	Value
App name	HI ma
Total modules	19 (M01 – M19)
Document owner	—
Last updated	—

1. How to use this document

1. Pick one module (example: **M05 — Chat**) and put your name in its **Owner** field.
2. Open the app as a real user and walk through every screen and action listed for that module.
3. Log every bug you find using the format **M##-###** . - Example: **M05-001** = first bug in the Chat module. - Example: **M10-014** = 14th bug in Wallet / Payments.
4. Update the **Status** column in the index table as you progress.
5. Detailed step-by-step test cases will be written per module in a later pass — for now, use the "What the user can do" and "Screens the user sees" bullets as your testing scope.

What to include in every bug report

- Bug ID — **M##-###**
- Module — example: **M05 – Chat**
- Screen where the bug happened (use the screen name from this doc)
- Steps you did to make the bug happen
- What you expected to see
- What actually happened
- Phone model + Android version
- App version (check Settings → About)
- Screenshot or short screen recording
- Severity — **Critical / High / Medium / Low**

Severity guide

Severity	Use when...
Critical	App crashes, money is lost, call drops completely, payment fails, user cannot sign up or log in
High	A main feature is broken but the user can still work around it (e.g. wrong coin deduction, call has loud noise)
Medium	Small feature broken or wrong on some devices only
Low	Text typo, icon misaligned, colour wrong, small cosmetic issue

2. Module index

ID	Module	Priority	Owner	Status
M01	First-time Setup & Login	Critical		[] Not started

ID	Module	Priority	Owner	Status
M02	My Profile & Account	High		[] Not started
M03	Home, Browse Users & View Profile	Critical		[] Not started
M04	Friends & Friend Requests	Medium		[] Not started
M05	Chat (text, photo, voice note)	Critical		[] Not started
M06	Audio Call (1-to-1)	Critical		[] Not started
M07	Video Call (1-to-1)	Critical		[] Not started
M08	Random Call	High		[] Not started
M09	IPL Voice Rooms (Group Voice)	High		[] Not started
M10	Wallet — Buy Coins & Pay	Critical		[] Not started
M11	Earnings & Withdraw (for creators)	High		[] Not started
M12	Star Creator Application	Medium		[] Not started
M13	Rating & Review after call	Medium		[] Not started
M14	Block, Report & Warnings (Safety)	High		[] Not started
M15	Help & Support Tickets	Medium		[] Not started
M16	Terms, Policies & Share App	Low		[] Not started
M17	Notifications (push & in-app)	Critical		[] Not started
M18	Links, Referral & Invite a Friend	Medium		[] Not started
M19	General app quality (all-round)	Critical		[] Not started

Status legend: [] Not started • [~] In progress • [x] Done • [!] Blocked

3. Modules — M01 to M19

M01 — First-time Setup & Login

What this module is about: Everything a brand-new user sees from the moment they open the app until they reach the Home screen. Also the login flow for returning users.

What the user can do: - Open the app for the very first time - Log in with their phone number and an OTP - Log in quickly using Truecaller (one-tap) - Choose their gender - Choose their preferred language

- Enter their display name - Go through the AI onboarding chat - Give permissions (mic, camera, notifications, storage) - Returning user: open app and skip straight to Home

Screens the user sees: - Splash screen (app logo) - Login screen (phone number + country code) - OTP entry screen (type the code that comes in SMS, or it auto-reads) - Truecaller one-tap popup (if Truecaller is installed) - Gender selection screen (Male / Female) - Language selection screen - Name entry screen ("What's your name?") - AI onboarding chat screens (guided questions) - Female users see extra steps — "About you" and "Almost done" screens - Permissions request screens (mic, camera, notifications) - Home (this is where onboarding ends)

What the user expects: - OTP should arrive within a few seconds - Truecaller login should skip the OTP step - Pressing Back mid-setup should not break the app - If the user closes the app halfway, reopening should take them to the same step - Once logged in, opening the app again should go straight to Home

Bug-ID prefix: M01-### | **Owner:** __ | **Status:** [] Not started

M02 — My Profile & Account

What this module is about: Managing my own profile — name, photo, voice sample, privacy, and deleting the account if I want to leave.

What the user can do: - View my own profile - Edit my name, bio and interests - Change my profile picture (pick from gallery, or choose from default avatars) - Record a voice sample for voice verification - Pick an IPL team badge to show on my profile - Change account privacy settings - Delete my account

Screens the user sees: - My Profile tab (bottom navigation) - Edit Profile screen (form fields + save button) - Avatar picker screen - Voice recording screen (press to record, preview, re-record, save) - IPL team selector - Account Privacy screen (toggles for each privacy option) - Delete Account screen (reason dropdown + confirm button) - Delete confirmation popup

What the user expects: - Changes are saved immediately and reflected next time I open my profile - Voice recording shows a waveform or timer while recording - Deleting the account should ask to confirm and should actually log me out - After deletion, the user cannot log back into the same account

Bug-ID prefix: M02-### | **Owner:** __ | **Status:** [] Not started

M03 — Home, Browse Users & View Profile

What this module is about: The main shell of the app — the bottom-navigation tabs and browsing other users.

What the user can do: - See a feed of available users on Home - Switch between Home, Recent, Favourite tabs - Pull down to refresh - Scroll and load more users - Tap a user to see their full profile - Start a chat, audio call, or video call from the other user's profile - Mark a user as Favourite / remove from Favourite - Try the "Random user" feature

Screens the user sees: - Main app screen with bottom navigation - Home tab (grid or list of users) - Recent tab (users I recently interacted with) - Favourite tab (users I have favourited) - Other user's Profile screen (with Chat / Audio Call / Video Call buttons) - Random user screen - Empty-state screens ("No users found", "Check your internet")

What the user expects: - Feed loads fast and keeps loading more as I scroll - User photos load clearly without broken image icons - Tapping a user always opens their profile - Favourite heart icon toggles and remembers the choice - Bottom nav stays visible and switches tabs instantly

Bug-ID prefix: M03-### | **Owner:** ____ | **Status:** [] Not started

M04 — Friends & Friend Requests

What this module is about: Sending friend requests, accepting / rejecting them, and managing the friends list.

What the user can do: - Send a friend request from another user's profile - Cancel a friend request I sent - See requests others sent to me - Accept or reject an incoming request - See my full friends list - Start a chat or call with a friend - Remove (unfriend) someone

Screens the user sees: - Friends tab / screen with sub-tabs: Sent, Received, Friends - Sent requests list - Received requests list (with Accept / Reject buttons) - My friends list - Empty-state screens (no friends, no requests) - Request sent / accepted toast messages

What the user expects: - The count of pending requests is correct - Accepting a request immediately moves the user to Friends list - Rejected users are removed from the Received list - If I block someone, they disappear from this list too

Bug-ID prefix: M04-### | **Owner:** __ | **Status:** [] Not started

M05 — Chat (text, photo, voice note)

What this module is about: One-to-one chatting with another user — text messages, photos, voice notes, reactions, typing indicator, block / unblock.

What the user can do: - See all my conversations in a list with last message preview - Open a chat and send text messages - See the other person typing - Send a photo (from gallery or camera) - Record and send a voice note - Play a voice note I received - React to a message with an emoji - Long-press to copy / delete a message - Block the other user from the chat screen - Unblock a previously blocked user - See read / delivered status on messages

Screens the user sees: - Chat list (all conversations with unread counts and last message preview — "Photo", "Voice note" or text) - Chat conversation screen (messages, input bar, emoji button, attach button, mic button) - Attachment bottom sheet (Camera / Gallery / etc.) - Image preview screen before sending - Voice note recording UI (press and hold mic, slide to cancel) - Voice note playback bar with play/pause and seek - Emoji / reaction picker popup - Block user confirmation popup - "Chat is free" label (where shown) - "Notify when online" toggle

What the user expects: - Messages appear instantly for both sender and receiver - Typing indicator appears when the other person is typing - Photos upload with a progress indicator and show a preview once uploaded - Voice notes record smoothly and play without cutting - If internet drops while sending, the message should retry or show a clear error - Reopening the chat shows the full message history - Blocking stops new messages from coming in; unblocking restores it

Bug-ID prefix: M05-### | **Owner:** __ | **Status:** [] Not started

M06 — Audio Call (1-to-1)

What this module is about: Making and receiving one-to-one voice calls between two users, including the full lifecycle — ringing, connecting, talking, ending.

What the user can do: - Call another user using voice (from their profile or chat) - Receive a voice call (with ringtone + full-screen incoming UI) - Accept or reject from the incoming screen or the notification - Mute / unmute my microphone - Switch to speaker / earpiece - Send a gift during the call - See the call timer ticking - End the call - See a missed-call notification if I don't pick up - See an "out of coins" popup when coins run out

Screens the user sees: - Outgoing call screen ("Calling...", with cancel button) - Incoming call screen (full screen, with Accept and Reject buttons, plays ringtone, vibrates) - Incoming call notification (when phone is locked or user is in another app) - Connecting screen ("Connecting...", briefly) - In-call screen (call timer, mute button, speaker button, end-call button, gift button) - Send gift bottom sheet (during call) - Out-of-coins popup (shown inside the call) - Missed call notification - Call-ended screen or toast - Rating popup after call (see **M13**)

What the user expects: - Ringtone plays until the call is answered or the 30-second timeout - Incoming call works even when the phone is locked - Accept / Reject from notification works the same as from the full screen - Mute, speaker, end-call respond instantly - Coins deduct every minute and the balance is visible - If the user minimises the app, the call continues in the background - If coins run out, the call ends with a clear message

Bug-ID prefix: M06-### | **Owner:** __ | **Status:** [] Not started

M07 — Video Call (1-to-1)

What this module is about: Same as audio call but with live video (two-way camera).

What the user can do: - Call another user using video - Receive a video call - Accept or reject a video call - Turn my camera on / off during the call - Switch between front and back camera - Mute / unmute microphone - Switch to speaker - Send a gift during the call - End the call

Screens the user sees: - Outgoing video call screen (with my preview + "Calling...") - Incoming video call screen - Connecting screen - In-call video screen (large remote video + small self-preview + controls: mute, camera on/off, flip camera, speaker, end, gift) - Face-detection safety warning popup (if it triggers) - Out-of-coins popup - Call-ended screen - Rating popup after call (see **M13**)

What the user expects: - Both users can see each other clearly - Video stays smooth on a normal Wi-Fi / 4G connection - Camera on/off and flip respond instantly - If the network gets slow, video may freeze briefly but the call should not crash - Minimising the app should not kill the call - Coins deduct at the video rate every minute

Bug-ID prefix: M07-### | **Owner:** __ | **Status:** [] Not started

M08 — Random Call

What this module is about: User taps "Random Call" and the app matches them with any available user.

What the user can do: - Start a random call - See a "Searching for user..." screen - Get matched with a random user and auto-enter a call - Cancel the search before a match is found - Retry if no user was found

Screens the user sees: - Random call start button (on Home or a dedicated tab) - Searching / matching screen (with cancel) - "No users available right now" state - Audio or video call screen once matched (same as **M06** / **M07**)

What the user expects: - Matching finishes within a reasonable time (few seconds) - If no one is available, show a clear message and let the user try again - Cancel button stops the search immediately - After the call ends, the user returns to Home or Random Call screen

Bug-ID prefix: M08-### | **Owner:** __ | **Status:** [] Not started

M09 — IPL Voice Rooms (Group Voice)

What this module is about: Cricket / IPL themed group voice rooms where many users talk together.

What the user can do: - Browse the list of active IPL rooms - Create my own room - Join a room (needs a minimum of 60 coins) - Join a room by entering a room code - Join a random room - Listen as a listener, or speak as a speaker - Mute / unmute myself - React with emojis during the room - Leave the room anytime - Host can close the room

Screens the user sees: - IPL Rooms list screen (active rooms, team banners) - Create Room screen - Join by Code popup - In-room screen (host on top, speakers, listeners, mute button, reactions, leave button) - Coin rules info (pop-up or info icon) - Auto-kick popup when coins run out - Match suggestions list - Empty state ("No rooms yet")

What the user expects: - Joining a room costs at least 60 coins and deducts 10 coins per minute after a short free grace period - Coin balance is visible during the room - Mute / unmute responds instantly - Reactions appear on screen for a few seconds - Leaving the room cleanly stops coin deduction - Host controls (mute others, close room) work only for the host

Bug-ID prefix: M09-### | **Owner:** ____ | **Status:** [] Not started

M10 — Wallet — Buy Coins & Pay

What this module is about: Everything to do with adding coins to my wallet — all the different payment methods, coupons, and the different payment outcomes (success / failed / pending).

What the user can do: - Check my coin balance - Choose a coin plan to buy - Apply a coupon code - Pay using Cashfree - Pay using PhonePe - Pay using UPI apps (Google Pay, PhonePe, etc.) - Pay using Google Play in-app purchase - Use the YouTube recharge option - Claim free coins (if eligible) - Try the small "try coins" offer

Screens the user sees: - Wallet screen (balance on top, buy-coins button, transactions link) - Coin plans screen (list of plans, best offer highlighted) - Coupon code entry screen / popup - Payment method selection popup - Payment method screens (Cashfree, PhonePe, UPI) - Add UPI screen (save my UPI id for later) - Payment web view (for bank OTP, 3D secure, etc.) - Payment in progress / Payment initiated screen - Payment success screen (coins added) - Payment failed / cancelled screen - Free Coins screen (claim button + eligibility) - YouTube Recharge flow

What the user expects: - The coin plan shown is the plan that actually gets bought - After successful payment, the wallet balance updates right away - A receipt / transaction entry appears in Transactions - If the payment fails or the user cancels, no coins should be added and no money deducted (or refunded) - Coupons either apply with a clear discount or show a clear "invalid" message - If the payment page is closed mid-payment, the app should recover cleanly

Bug-ID prefix: M10-### | **Owner:** __ | **Status:** [] Not started

M11 — Earnings & Withdraw (for creators)

What this module is about: The creator-side money flow — how much I earned, and taking that money out to my bank / UPI.

What the user can do: - See today's / this week's / this month's / total earnings - See a list of all my transactions (calls, chats, gifts, withdrawals) - Add or update my bank account details - Add or update my UPI id - Upload my PAN card (KYC) - Request a withdrawal to bank - Request a withdrawal to UPI - See the status of each withdrawal (pending / success / rejected)

Screens the user sees: - Earnings screen (summary + chart or numbers) - Transactions screen (full history, scroll + filter) - Female transactions screen (creator-specific view) - Bank Update screen (account number, IFSC, name) - Add UPI screen - KYC screen (PAN upload with camera / gallery) - Withdraw screen (amount + method + charges) - Withdraw confirmation popup - Withdrawal status messages

What the user expects: - Earnings figures match what was earned from calls and chats - Withdrawal cannot be requested without KYC + bank / UPI details - Transaction charges are shown clearly before the user confirms - Once submitted, withdrawal status updates over time (pending → success / rejected) - Minimum withdrawal amount is clearly stated - If KYC is rejected, the user can resubmit

Bug-ID prefix: M11-### | **Owner:** __ | **Status:** ☐ Not started

M12 — Star Creator Application

What this module is about: The application flow for users who want to become a "Star Creator".

What the user can do: - Start the Star Creator application - Fill the application form - Record a self-introduction video - Preview and re-record the video - Submit the application - Check my application status

Screens the user sees: - Star Creator landing / info screen - Application form screen - Video recording screen (with record button and timer) - Video preview / retake screen - Submit button + loading state - "Application submitted" screen - Application status screen (Applied / Approved / Rejected)

What the user expects: - The video records clearly with good audio - Uploading the video shows progress - The user gets a clear confirmation after submitting - If rejected, the user should be able to apply again

Bug-ID prefix: M12-### | **Owner:** __ | **Status:** [] Not started

M13 — Rating & Review after call

What this module is about: The popup that appears after a call, asking the user to rate the other person.

What the user can do: - Rate the other user 1 to 5 stars - Select review tags (e.g. "fun conversation", "rude behaviour") - Submit the rating - Skip the rating - Rate-limit: rating only shown when eligible

Screens the user sees: - Rating popup (stars + tags + submit + skip) - Review tags screen (selectable chips) - Thank-you / confirmation message after submitting

What the user expects: - The rating popup appears only after an actual call happened - Once rated or skipped, the same popup should not keep re-appearing - The selected tags and star rating are actually submitted - Submitting works even on slow networks (retry on failure)

Bug-ID prefix: M13-### | **Owner:** __ | **Status:** [] Not started

M14 — Block, Report & Warnings (Safety)

What this module is about: All user-safety features — blocking a user, reporting bad behaviour, and viewing warnings the user has received.

What the user can do: - Block a user from their profile, from a chat, or from a call - Unblock a previously blocked user - Report a user with a reason (inappropriate, fake, etc.) - View warnings I have received (as a user) - View warnings I have received (as a creator) - Read community guidelines link

Screens the user sees: - Block / Report menu from three-dot (:) menu on profile / chat / call screens - Block confirmation popup - Report User screen (reasons list, description field, submit) - My Warnings screen (list of warnings I got) - Creator Warnings screen (for creators, separate list) - Community Guidelines link / screen

What the user expects: - After blocking, the other user cannot message or call me - After blocking, their profile disappears from Home / Recent - Unblocking brings everything back - Reporting a user shows a confirmation and removes them from my view - Warnings show clear text, date and the reason

Bug-ID prefix: M14-### | **Owner:** __ | **Status:** [] Not started

M15 — Help & Support Tickets

What this module is about: The help centre — FAQ, raising a support ticket, and seeing my ticket history.

What the user can do: - Browse help topics (categories) - Read FAQ / sub-query answers - Watch explanation videos - Open WhatsApp support chat - Submit a new support ticket (with screenshot attachment) - View my previous tickets and their status

Screens the user sees: - Help & Support home screen (category tiles, search) - Categories list - Sub-queries list under each category - Sub-query detail screen (answer + related actions) - Submit Ticket screen (subject, description, attach button, submit) - My Tickets list (each ticket with status: Open / In progress / Resolved) - Ticket detail screen (thread of messages, if applicable) - WhatsApp support button (opens WhatsApp) - Explanation video player

What the user expects: - Categories and FAQs load fast - Submitting a ticket works with or without an attachment - Tickets I submitted show up immediately in "My tickets" - WhatsApp button opens the right WhatsApp number - Videos play smoothly

Bug-ID prefix: M15-### | **Owner:** ____ | **Status:** [] Not started

M16 — Terms, Policies & Share App

What this module is about: Legal / policy pages and sharing the app with friends.

What the user can do: - Read Terms & Conditions - Read Refund Policy - Read Community Guidelines - Tap external links inside policy pages - Share the app (WhatsApp, other apps) - See my refer-a-friend code

Screens the user sees: - Terms & Conditions page (scrollable) - Refund Policy page (scrollable) - Community Guidelines page - Share / Refer screen (share link + copy code + share buttons) - In-app browser for other external links

What the user expects: - Pages load without errors even on slow networks - Scroll works smoothly, text is readable on small screens - Share button opens the Android share sheet with a valid link - Refer code is unique and copyable

Bug-ID prefix: M16-### | **Owner:** __ | **Status:** [] Not started

M17 — Notifications (push & in-app)

What this module is about: All the alerts the user receives — incoming calls, chat messages, missed calls, promotions — and how the app handles them.

What the user sees / experiences: - Incoming call notification (full-screen + ringtone + vibrate) even when the phone is locked - Missed call notification (after a missed incoming call) - New chat message notification (with sender name + preview) - Message notification directly deep-links into that chat - Friend request notification - Promotional / offer notifications - Notification badge / count on the app icon

What the user expects: - Incoming call notification actions (Accept / Reject) work exactly like the in-app buttons - Tapping a chat notification opens the exact chat (not Home) - Missed call notification disappears once the user opens the app - Notifications do not arrive when the user has turned them off in Settings - No duplicate notifications - Notifications show the correct app icon + colour - On Android "Do Not Disturb", incoming call still rings (because it's a phone-style call)

Bug-ID prefix: M17-### | **Owner:** __ | **Status:** [] Not started

M18 — Links, Referral & Invite a Friend

What this module is about: Opening the app from outside (links from Google, WhatsApp messages, etc.) and earning by inviting friends.

What the user can do: - Tap a shared app link and land on the right screen inside the app - Tap a shared link when the app is not installed → go to Play Store → install → open app with the same content - Enter a referral code during signup and get bonus coins - Share my own refer link with friends - Earn when a friend installs and becomes active

Screens the user sees: - App opens directly to the shared content (wallet / user profile / room / chat / promotion) - Referral code entry field (usually during signup or on a dedicated Refer screen) - Refer & Earn screen (my code, share buttons, rules) - "Bonus credited" message when a friend joins

What the user expects: - Any link shared from the app actually opens the app (not the browser) if the app is installed - Referral codes are validated and bonus appears in Wallet - Share buttons (WhatsApp, more) carry the link correctly - Tracking is honest — the right user gets credit for the invite

Bug-ID prefix: M18-### | **Owner:** __ | **Status:** [] Not started

M19 — General app quality (all-round)

What this module is about: Situations that are not one feature but can happen in any screen — these should be tested across the whole app, not just one module.

Situations the user can be in: - No internet connection - Slow 2G / 3G network - Switching between Wi-Fi and mobile data mid-action - App minimised in the background, then reopened - Phone call comes in during an audio / video call - Low battery / battery-saver mode turned on - User rotates the phone or uses split-screen - Phone locked during a call, chat, or payment - User changes phone language - User denies a permission (mic, camera, notifications) - Force-stop the app and reopen - Force-update popup appears for old app versions - Log out and log back in with the same number - Using the app on a small screen phone, a large phone, and a tablet - Old Android version vs latest Android version

What the user expects: - The app never crashes in any of these situations - Clear error messages ("No internet", "Try again") instead of silent failures - Nothing freezes or stays stuck on a loader forever - Payments, calls, and chats recover cleanly after a network drop - Data is not lost when the app is minimised or force-stopped

Bug-ID prefix: M19-### | **Owner:** __ | **Status:** [] Not started

4. Appendix

A. Device & OS matrix (fill during planning)

Device	Brand	Android version	Screen size	Assigned to

B. Reference documents already in the repo

- App_Testing_Checklist_QA_v2.pdf — general QA checklist → helpful for **M19**
- Manual_App_Testing_Checklist.pdf — manual testing checklist
- Manual_Testing_How_to_Report_Findings.pdf — how to report findings
- IPL_ROOMS_FULL_QA_REPORT.html and other IPL reports → already covers **M09** prior findings

C. Final sign-off checklist (for QA Lead)

- ☐ All 19 modules have an Owner assigned
 - ☐ All 19 modules have been fully tested on at least 2 devices
 - ☐ All Critical and High bugs are fixed or deferred with approval
 - ☐ Device matrix (Appendix A) is filled and signed off
 - ☐ Smoke test done on the final signed release build
-

End of document. Detailed step-by-step test cases will be added in a separate pass, per module.
